DETAILED ACTION

Specification

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. The specification is objected to under 35 U.S.C. § 112, first paragraph, as failing to provide an adequate written description of the invention. The applicant has failed to incorporate a foreign test standard in the specification.

3. The incorporation of essential material by reference to a foreign application or foreign patent or to a publication inserted in the specification is improper. Applicant is required to amend the disclosure to include the material incorporated by reference. The amendment must be accompanied by an affidavit or declaration executed by the applicant, or applicants attorney or agent, stating that the amendatory material consists of the same application. *In re Hawkins*, 486 F.2d 569, 179 USPQ 157; *In re Hawkins*, 486 F.2d 569, 179 USPQ 163; *In re Hawkins*, 486 F.2d 569, 179 USPQ 167.

4. In order to avoid a 35 U.S.C. § 112, first paragraph rejection when the applicant attempts to incorporate a foreign test standard in the specification (for example see page 11, line 11), it is recommended that the applicant further incorporates the standard in the specification or submit an English translation of the standard.

Art Unit: 1774

Claims

5. Claims 1-4 are rejected under 35 U.S.C. § 112, first paragraph, for the reasons set forth in the objection to the specification.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Arai et al. (US 4,686,118) in view of applicant's admission (see page 5 lines 3-19 of specification).

Arai discloses a recording medium comprising a transparent substrate, an ink receiving layer on the substrate, and an ink permeable layer on the ink receiving layer (abstract). Polyester may be used to make the ink permeable layer (col. 6, line 63 thru col. 7, line 43). Arai's ink permeable layer would have the claimed characteristics because applicant admits that polyester based resin has the claimed characteristics such as glass transition temperature and hardness within the claimed range.

8. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Onishi (EP 0 841 185 A1).

Art Unit: 1774

Onishi discloses a back-print recording medium comprising a transparent substrate, an ink receiving layer on the substrate, an ink permeable layer on the ink receiving layer (abstract). Polyvinyl alcohol may be used to make the ink permeable layer (claim 4). Onishi's ink permeable layer would have the claimed characteristics because applicant admits that polyvinyl alcohol based resin has the claimed characteristics such as glass transition temperature and hardness within the claimed range.
